COVER LETTER

Dear Hiring Manager,

I am writing to express my interest in opportunities as a Senior Full Stack Developer. With over four years of hands-on experience in software development and a proven record of delivering reliable and scalable enterprise applications, I am confident that my technical expertise and problem-solving approach would add value to your team.

In my current role at Cognizant Technology Solutions, I have led the development of insurance features using Java and Angular, contributing to a 20% growth in client revenue. I also introduced optimisation measures that improved application performance by 30%, while ensuring all projects were delivered on schedule with a consistent focus on quality. Beyond development, I mentor junior engineers, encouraging best practices and strengthening overall team productivity. My efforts in driving Agile adoption have shortened delivery cycles by 15% and enhanced stakeholder engagement.

Previously at SS&C FinTech, I engineered scalable applications using Java, Spring Boot, and .NET Core Microservices, raising system uptime by 25% and reducing SQL query response times by 35%. A highlight of my work there was designing and implementing a financial analytics dashboard, which automated reporting, cut manual effort by 40%, and empowered real-time decision-making for over 500 users.

I hold a Bachelor's degree in Computer Engineering and several professional certifications, including Oracle Certified Associate – Java SE Programmer, AWS Certified Developer – Associate, Scrum Professional Certification, and Angular Developer Certification. These reflect both my commitment to continuous learning and my ability to apply modern technologies effectively.

My technical skill set spans Java, Spring Boot, Angular, React, SQL, AWS, Docker, Kubernetes, Git, and CI/CD pipelines. I take particular interest in building secure and efficient microservices architectures, optimising database performance, and leveraging cloud services to improve scalability and resilience. Alongside strong backend and frontend development expertise, I also enjoy contributing to open-source projects and mentoring peers, both of which keep me connected to the wider developer community.

I bring a combination of technical depth, delivery excellence, and a genuine enthusiasm for software development. I am eager to contribute my skills to new challenges while continuing to grow within a collaborative and forward-looking environment.

Thank you for considering my application. I would welcome the opportunity to discuss how my background and experience align with your requirements.

Yours sincerely,
Rahul Shahaji Satav
